

Setting Up Practice Exams

Automated Practice exams allows your test-takers to get comfortable with Examity and practice the set up process before starting their actual exam. No video or flags are stored and the exam will not be audited.

How to Get Started

1. Contact your dedicated account manager to request Automated Practice exams are turned on.
2. In your LMS, set up a practice exam with a password and at least 10 attempts (you can also create the exam directly in Examity and 10 attempts will be the default).
3. Once in Examity, find the exam and select Automated Practice as the security level in the exam shell.
4. Finally, click "Save Changes." Your students will now be able to test.

The screenshot shows the Examity exam configuration page with the following fields and options:

- Info** | Rules | Instructions | Supporting Documents | **Scheduling Exceptions** | Exam Results
- Buttons: **New Scheduling Exception** | **Delete Exam**
- Course**: Intro Economics
